The first applet shows the solution to $\frac{dx}{dt} = Ax$, plotted both as functions as time and in the phase plane. The applet demonstrates how the phase plane represents the solution trajectory $(x(t), y(t))$ through time. Phase Plane Insight to Matrix Calculations - sae.org The equivalence of phase plane representation and matrix transformations is demonstrated. The insight gained from phase plane diagrams is used to generate matrix transformations for use with aperiodic inputs to single degree of freedom systems damped and undamped.

Introduction to phase plane analysis - Math Insight Sketch a plausible solution in the phase plane starting at the initial condition of 120 and 120 , i.e., $(s(0), b(0)) = (120, 120)$. The solution should be consistent with your direction arrows. (We need more information to determine exactly what the solution should look like.
